Lab 8: Win32 apps, Microsoft 365 Apps, MAM and app configuration

Duration: 120 minutes
 Alignment: LO2 | LO3 | K2 | K3 | A2 | A5
 Deliverable: Deployable app contract, detection evidence, MAM/CA test matrix and troubleshooting trace

Safety and prerequisites

- Use only the training tenant, test users and test devices supplied by the trainer.
- Confirm the tenant ID before any change.
- Capture before-state evidence and use least privilege.
- Ask before wipe, retire, isolate, reprovision or other destructive actions.

Build a Win32 app contract

1. Package the trainer-provided source with the Intune Win32 Content Prep Tool or inspect the supplied .intunewin metadata.
2. Define silent install and uninstall commands with the correct context.
3. Create version-aware detection and explicit requirement rules.
4. Map vendor exit codes to success, retry, soft reboot and hard reboot.

Acceptance check: capture the configured state, observed result, timestamp/correlation ID and interpretation.

Deploy and sequence

1. Upload/create the app in Intune and assign it to the pilot group.
2. Configure the supplied prerequisite as a dependency.
3. Configure supersedence for the previous version without creating a cycle.
4. Trigger device sync and monitor install status.

Acceptance check: capture the configured state, observed result, timestamp/correlation ID and interpretation.

Protect app data

1. Create an app protection policy for the supported mobile app.
2. Set work-data transfer, encryption, access and selective-wipe controls.
3. Create a Conditional Access policy requiring app protection in report-only mode.
4. Test managed and unmanaged device/app combinations using the evidence matrix.

Acceptance check: capture the configured state, observed result, timestamp/correlation ID and interpretation.

Troubleshoot and close

1. Seed a detection or requirement-rule failure.
2. Inspect IntuneManagementExtension.log and the per-device install details.
3. Correct the smallest failing contract element and retry.
4. Capture installed version, detection success and app-protection status.

Acceptance check: capture the configured state, observed result, timestamp/correlation ID and interpretation.

Evidence submission

Save evidence under evidence/ and complete evidence/README.md. Do not include passwords, recovery keys, tokens, tenant secrets or unrelated personal data.
